

SIGNAL (UNDERGROUND WARNING DEVICES)

Signal is an underground warning tape used for the marking and location of buried pipes and cables. It is laid in the excavation trench about 500mm above the cable or pipeline. During future re-excavation works, the highly visible band will alert excavators to the pipe / cables below.

APPLICATIONS

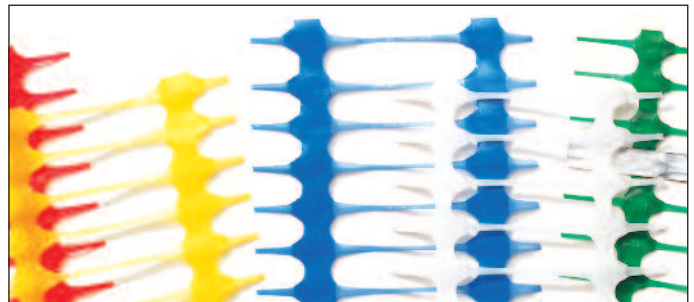

Underground pipes
Gas and electric lines
Oil pipes and communication cables

There are 3 signal products all available in different widths and colours

Signal – Un-printed and available in a number of colours to identify different applications.

Signal N – This one can be printed with a warning message

Signal NB – With a metallic strip so it is easy to identify with a metal detector.

PLURIMA - FOR CONTAMINATED SOIL

Plurima is a strong, flexible, highly visible orange mesh designed for the identification of contaminated or slightly hazardous soil beneath construction sites or on land remediation works. Its 4m width makes it a cost effective alternative to Signal where pipe identification is not needed.

ADVANTAGES:

- Highly visible
- Easy to install
- Cost effective
- Rot proof and chemical resistant
